

ALTA METRIS

**COMPANY'S
PRESENTATION**

ALTAMETRIS

Incubated in 2012 within SNCF RESEAU, Altametrис meets the needs of asset management from its inception through robotic and intelligent capture methods and algorithms that transform data into knowledge. Subsidiary in 2017, the company has experienced strong growth over the past five years. In particular, it invests more than 10% of its revenues in R&D. Its historic partners include the National Office for Aerospace Studies and Research (ONERA).

Our activity is structured around 4 main products:

Altametrис Services: entity dedicated to the valorization of intellectual services of assistance to project management on the themes of co-development, digital twin, asset management and industrial deployment of new technologies.

Altametrис Suite: dedicated entity and software solution in SaaS mode, Altametrис Suite is a platform that allows our customers to plan their data acquisitions, manage raw data and validate their quality before mobilizing micro-integrated services to transform them into business knowledge.

Altametrис Solutions: entity that brings together our turnkey services dedicated to topography, mapping, surveillance and facility inspection assistance by drone, robot or helicopter.

Companion: The Companion Program was created to meet the agility and responsiveness needs of operational teams for monitoring and controlling the facilities under their control. It includes professional remote pilot training, equipment leasing and flight request management software.

The company has half its workforce in the Ile de France and operates regional offices in Lyon, Marseille and Bordeaux. This organization allows it to serve the territory in three zones: Far North, South East Mediterranean and Atlantic.
